- **Brushing:** Brushing your pets teeth is the gold standard. Just like us, pets build up plaque and tartar. Brushing every day or even 3 times a week helps prevent tartar formation to keep your pets teeth and gums healthy.
- **OraVet:** This product is a weekly alternative to brushing. A paste is applied to your pets teeth by you at home to prevent plaque and tartar.
- **Oral Rinse:** Used 3-7 times per week can help reduce plaque and tartar formation.
- **Special Diet:** Beneficial to fight plaque and tartar. Diets like Eukanuba Adult Plus and Eukanuba Senior Plus are healthy alternatives to lower quality pet foods.
- **Toys/Treats:** There are a variety of toys and treats made especially for dental health. Used in combination with other products they can slow down tartar growth.

---

Decline any home dental care: I understand that home dental care is important to keep my pet healthy. Slowing the formation of tartar increases the time between dental cleanings and decreases the need for extractions and periodontal disease treatment.
